quality Service Selection value

For 30 years, the parent company of Norman has provided function and fashion to homes around the world as the largest manufacturer of window coverings. We uphold this tradition with our versatile line of best-in-class custom interior shutters. This fine window furniture is manufactured with many unique features that make it the most lasting and beautiful shutter collection crafted today.

A close-up, low-angle shot of a modern, light-colored wooden staircase. The stairs are made of light wood and have a simple, clean design. The background is a solid teal color. The text "invest wisely" is overlaid on the bottom right of the image.

Value in

EVERY DETAIL

For centuries, shutters have been prized as fine window furniture and a testament to a homeowner's discerning style and sophistication. Shutters not only provide design, privacy, and light control options, they can also enhance the value of a home. Like any home investment, only shutters of exceptional quality will provide long-term value and increase appreciation.

At Norman, we feel the best shutter, whether hardwood or composite wood, is the result of meticulous management of each stage in its creation. Every step: research and development, product design, raw materials sourcing, handcrafting, quality control, and even packaging are carried out with one goal. We strive to bring you best-in-class shutters with matchless quality, durability, and long-term value in your investment.

the character of Woodlore

ADVANCED DURABILITY

Woodlore Shutters are designed to offer the highest performance in a composite wood shutter at a reasonable price, providing an enduring, distinguishing accent to any home.

On the following pages you will learn more about the distinctive construction features that ensure every Woodlore Shutter we craft will be beautiful, durable, and trouble-free.

exceptional appearance

*O*ur shutters offer traditional décor options for your home. They are available in a selection of classic colors and can be ordered with a variety of custom design options like decorative sills, sill plates, louvers in multiple sizes, different frame profiles, hidden or offset tilt rods, and bypass or bi-fold systems to cover patio doors. To further complement their tailored design, Norman's patented Deco frame adds decorative molding to unadorned windows.

WOODLORE SHUTTERS FEATURE A PATENTED
POLYMER COATING WITH UV INHIBITORS, WHICH
RESIST FADING AND STAINING.

durability

As a busy homeowner, you expect innovative products that retain their functionality and good looks without excessive maintenance. Woodlore's UV inhibitors protect against color fading and yellowing, and our patented polymer coating resists staining to ensure long-term performance in a variety of environments. Woodlore Shutters withstand temperatures up to 140° F, so they won't sag when exposed to window heat like many hollow vinyl products. In addition, they resist cupping and warping, ensuring tight closure plus smooth panel and louver operation.

All Woodlore Shutters are made with a solid composite wood core. This gives the louvers and panels a hearty, substantial feel that is much more like natural wood than hollow vinyl products.

A SOLID COMPOSITE WOOD CORE
MAKES WOODLORE SHUTTERS
MORE SUBSTANTIAL.

We also help homeowners avoid one of the most bothersome experiences of shutter ownership: staple failure. Staples that hold the tilt rod to the louvers can become dislodged over time. Our product engineers designed a system we're so proud of that we guarantee it will never disappoint.

We start with a stainless steel staple which resists corrosion. Our staples are also longer than the industry standard, providing more traction surface when embedded in the louver. Finally, we've developed a glue that actually increases its grip when exposed to friction. The result is a failure-proof tilt rod attachment system.

NORMAN SHUTTERS USES STAINLESS STEEL STAPLES THAT ARE LONGER THAN THE INDUSTRY STANDARD AND SECURED WITH FRICTION-ACTUATED GLUE.

advanced

ENGINEERING & DESIGN

Our Woodlore Shutters start with a premium composite wood substrate. We employ only the finest composite wood materials and technology in the manufacturing process, thus creating a superior foundation for our products. We also capitalize on using the sturdiest areas of the board for optimum panel strength and performance.

Computer-drafting methods are used to design the layout for your custom shutters in a way that maximizes their application. The result is not only increased strength, but also better joint and louver performance.

WOODLORE SHUTTERS ARE MANUFACTURED TO UTILIZE THE STRONGEST AREA OF THE COMPOSITE WOOD MATERIAL.

Engineered stiles for

STABILITY

A well-crafted shutter closes solidly, does not have light gaps, and stays that way year in and year out. To accomplish this, each part of the shutter must resist twisting, bowing, cupping, and all other forms of instability.

We are the only shutter manufacturer to compensate for this tendency to deform by using reinforced engineered wood. We employ a procedure that bonds multiple layers of wood together with pressure, heat, and a proprietary chemical formulation. This imparts an intense level of stability to the cores of our stiles and results in a robust support system for your shutter panels.

This is a more costly process, compared to using a single solid piece of wood, but we don't believe that stability should be compromised at any cost.

TO INHIBIT DEFORMATION, BONDING MULTIPLE LAYERS OF WOOD TOGETHER WITH PRESSURE, HEAT, AND A PROPRIETARY CHEMICAL FORMULATION CREATES THE CORE OF NORMAN SHUTTERS REINFORCED ENGINEERED STILE.
